

Interaction styles

Interaction Styles

“The concept of Interaction Styles refers to all the ways the user can communicate or otherwise interact with the computer system.”

Soegaard, Mads. Interaction Styles (Retrieved March 2020)

http://www.interactiondesign.org/encyclopedia/interaction_styles.html

There are a lot of studies and design guidelines

Shneiderman's Eight Golden Rules of Dialogue Design

1. Strive for consistency
2. Enable frequent users to use shortcuts
3. Offer informative feedback
4. Design dialogues to yield closure
5. Offer simple error handling
6. Permit easy reversal of actions
7. Support internal locus of control
8. Reduce short-term memory load

These golden rules are paramount in the design process

<https://www.interaction-design.org/literature/article/shneiderman-s-eight-golden-rules-will-help-you-design-better-interfaces>

Support internal locus of control

- Allow users to be the initiators of actions
- Give users the sense that they are in control of events

Design dialogue to yield closure

- Don't keep users guessing.
- Tell them what their action has led them to

Allow easy reversal of actions

encouraging exploration of unfamiliar options

undo – CTRL z

Allow frequent users to use shortcuts

Common examples:

save – CTRL s

copy – CTRL c

Name:

Address:

City: State: Zip:

A possible classification:

- Menus
- Fill-in-forms
- Direct manipulation
- Function keys
- Question and answer
- Command languages
- Natural languages

Often two or more styles are used simultaneously

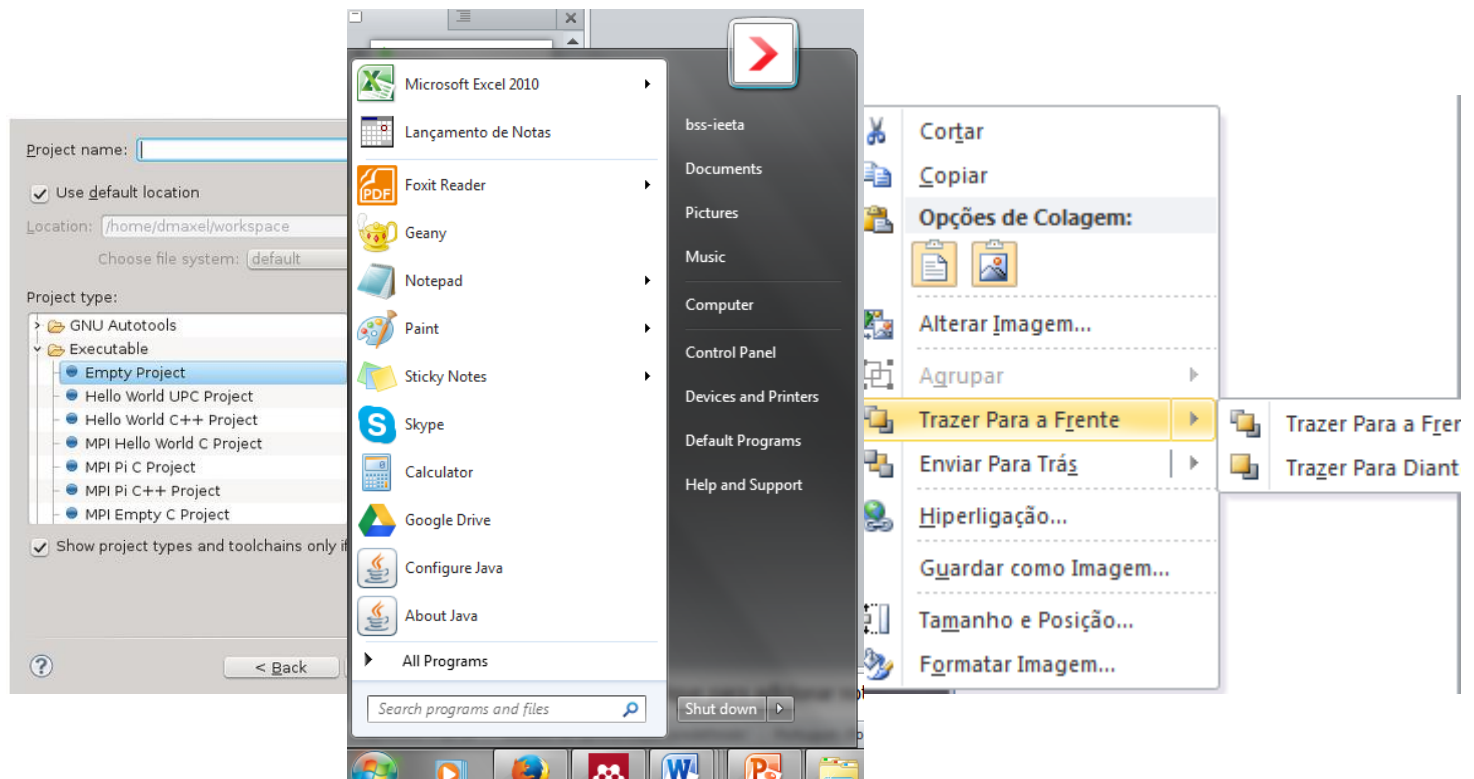

Less traditional user interfaces (UIs):

- 3D user interfaces
- Tangible user interfaces
- etc....

Menus

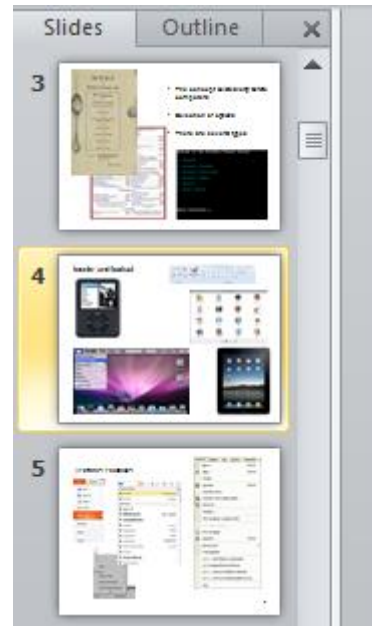

- The concept existed long before computers
- Selection of options
- There are **several** types

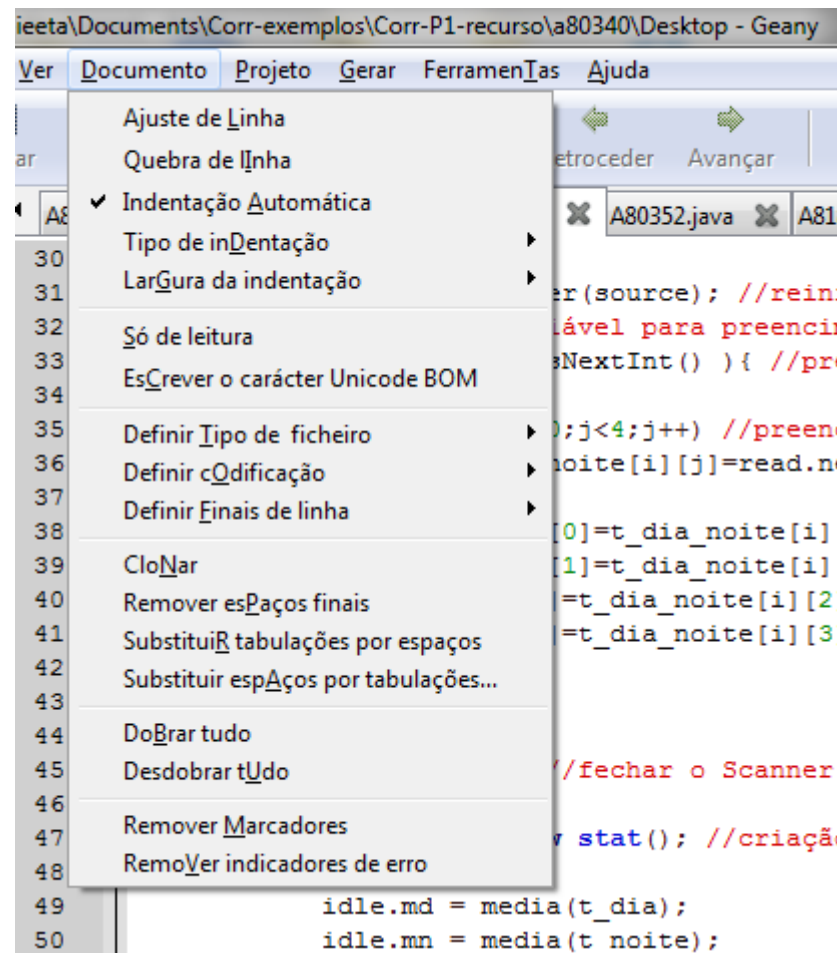

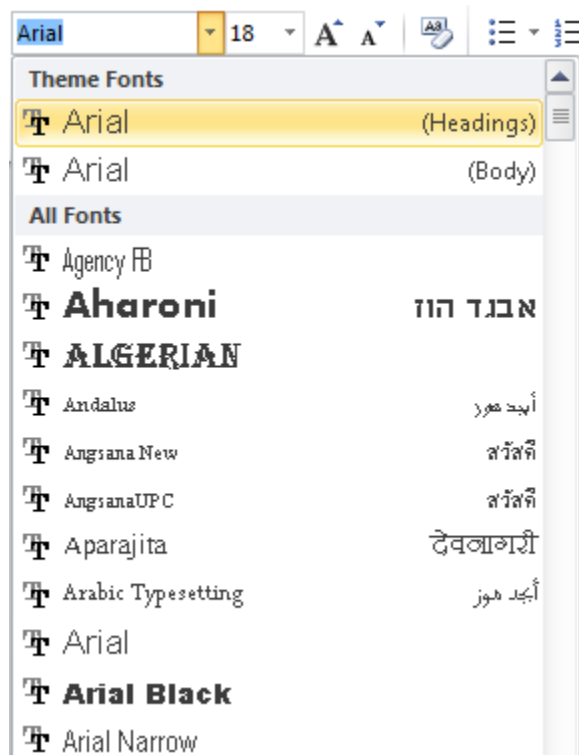

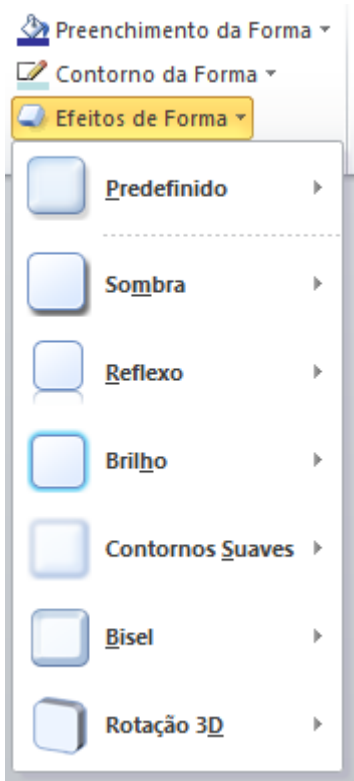

AMERICAN ENTRIES	
Baked Homestyle Lasagna	\$8.95
Baked Ziti or Baked Ravioli (Cheese or Meat)	\$8.25
Baked Manicotti	\$8.95
Baked Stuffed Shells	\$8.95
Baked Stuffed Shells Florentine	\$9.50
<i>Above served with a tossed salad</i>	
GRINDERS (Toasting)	
Chicken Parmigiana	\$7.25
Meatball or Sausage Parmigiana	\$6.95
Veal Cutlet Parmigiana	\$7.95
Eggplant Parmigiana	\$6.95
<i>Above served hot with tomato sauce & mozzarella cheese</i>	
<i>Extras on grinders: Cheese + \$1.00, Bacon or Ham + \$1.00, Mushrooms + \$1.00, Peppers or onions + .75</i>	
CALZONES	
Plain (Stuffed with onions & sliced mushrooms)	\$8.95
Extra Item	\$2.00

Iconic

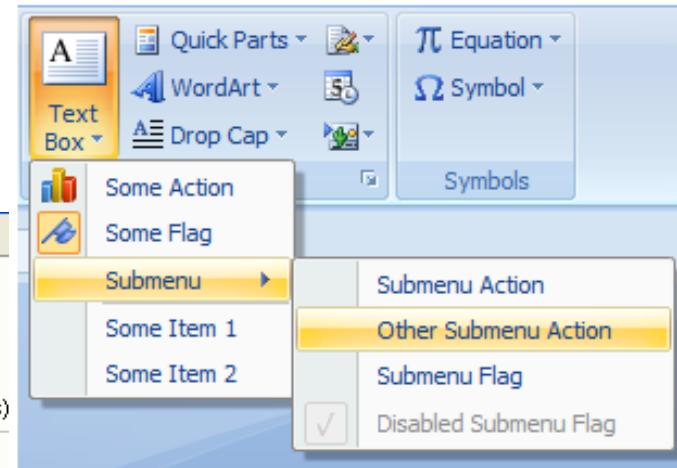

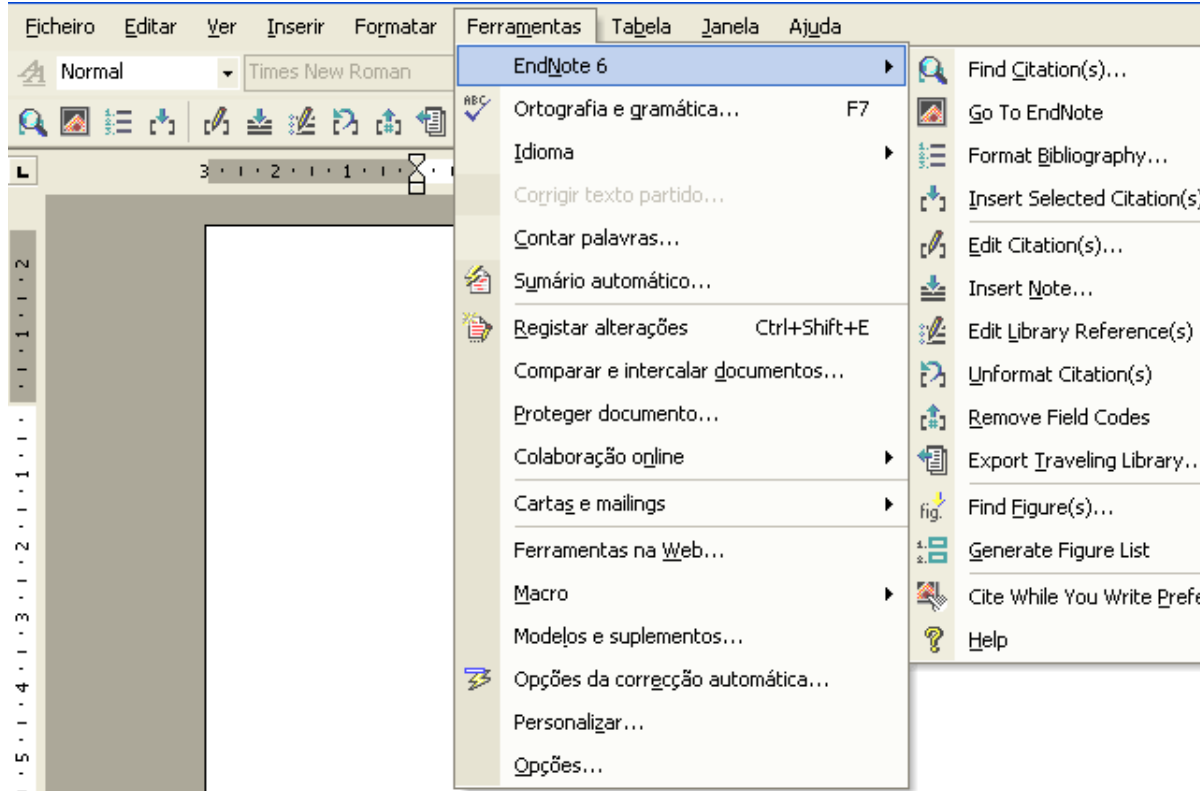

Textual

Pull-down/ pull-up menus

Cascading menus

Main Heading

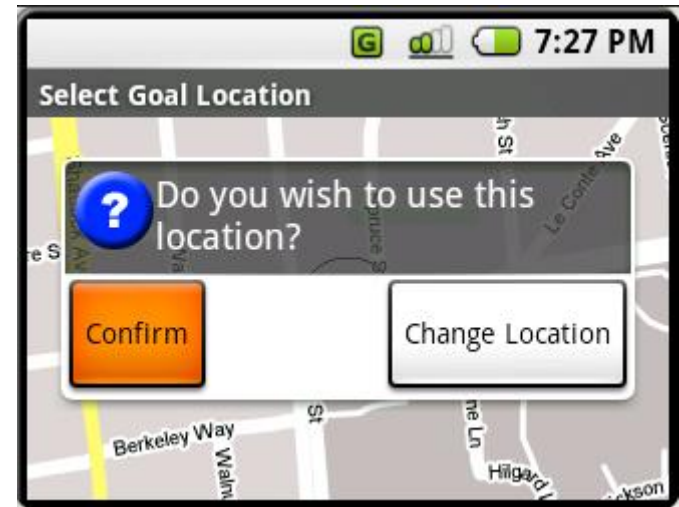

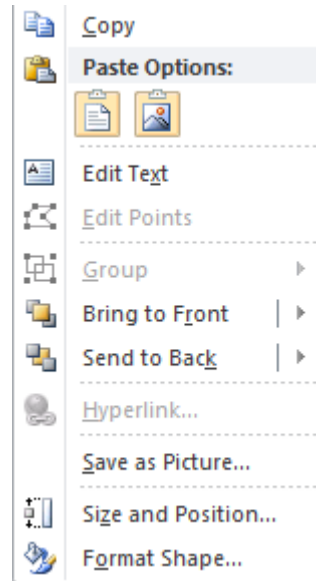

Menu 1

Menu 2

Menu 3

Always visible / Pop-ups

Menus: main advantages and disadvantages

Advantages (potential, i.e. **if properly designed**)

- Auto-explanatory
- Do not load memory (recognition rather than recall)
- Prevent syntactic errors
- Visible improvements

Disadvantages

- Not efficient
- Not flexible
- Not practical for many options

User profile to whom menus are adequate:

Knowledge and experience:

- Low system and task experience
- Frequent usage of other systems
- Low computational literacy

Work and task:

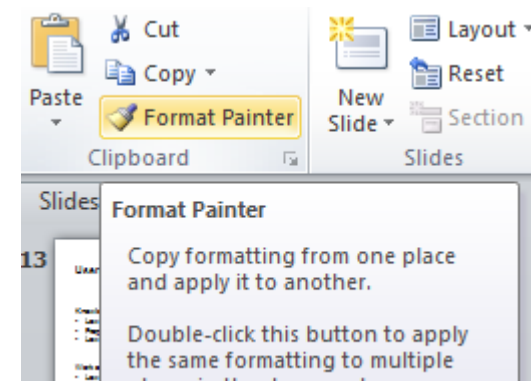

- Low frequency of use
- No training
- Optional usage
- Highly structured tasks

Menu design: relevant aspects

- Menu structure
- Option ordering
- Option selection
- Menu invocation
- Navigation

Menu design: guidelines

- Adequate the menu structure to the task structure
- Minimize depth increasing breadth (within reasonable limits)
- Use an adequate ordering method
- Be coherent (design, option names, etc.)
- Give selection feedback to the user
- Include tooltips if names or icons are not auto-explanatory
- Indicate currently unavailable options
- ...
- Etc. etc.

Menu design: guidelines

- Find the adequate structure using card sorting:
a low-cost method that helps understanding how users expect to find content or functionality

- Card sorting (usually performed by potential users of an interactive solution) provides information on:
 - Terminology (what people call things)
 - Relationships (proximity, similarity)
 - Categories (groups and their names)
- that can be used to decide upon:
 - which items should be grouped together in displays
 - how menu contents should be organized and labeled
 - what words should be employed to describe the objects of our users' attention

Card sorting example: think about how to sort the fruits and vegetables sold in a supermarket (may be it is not as easy as it seems...)

http://www.interaction-design.org/encyclopedia/card_sorting.html

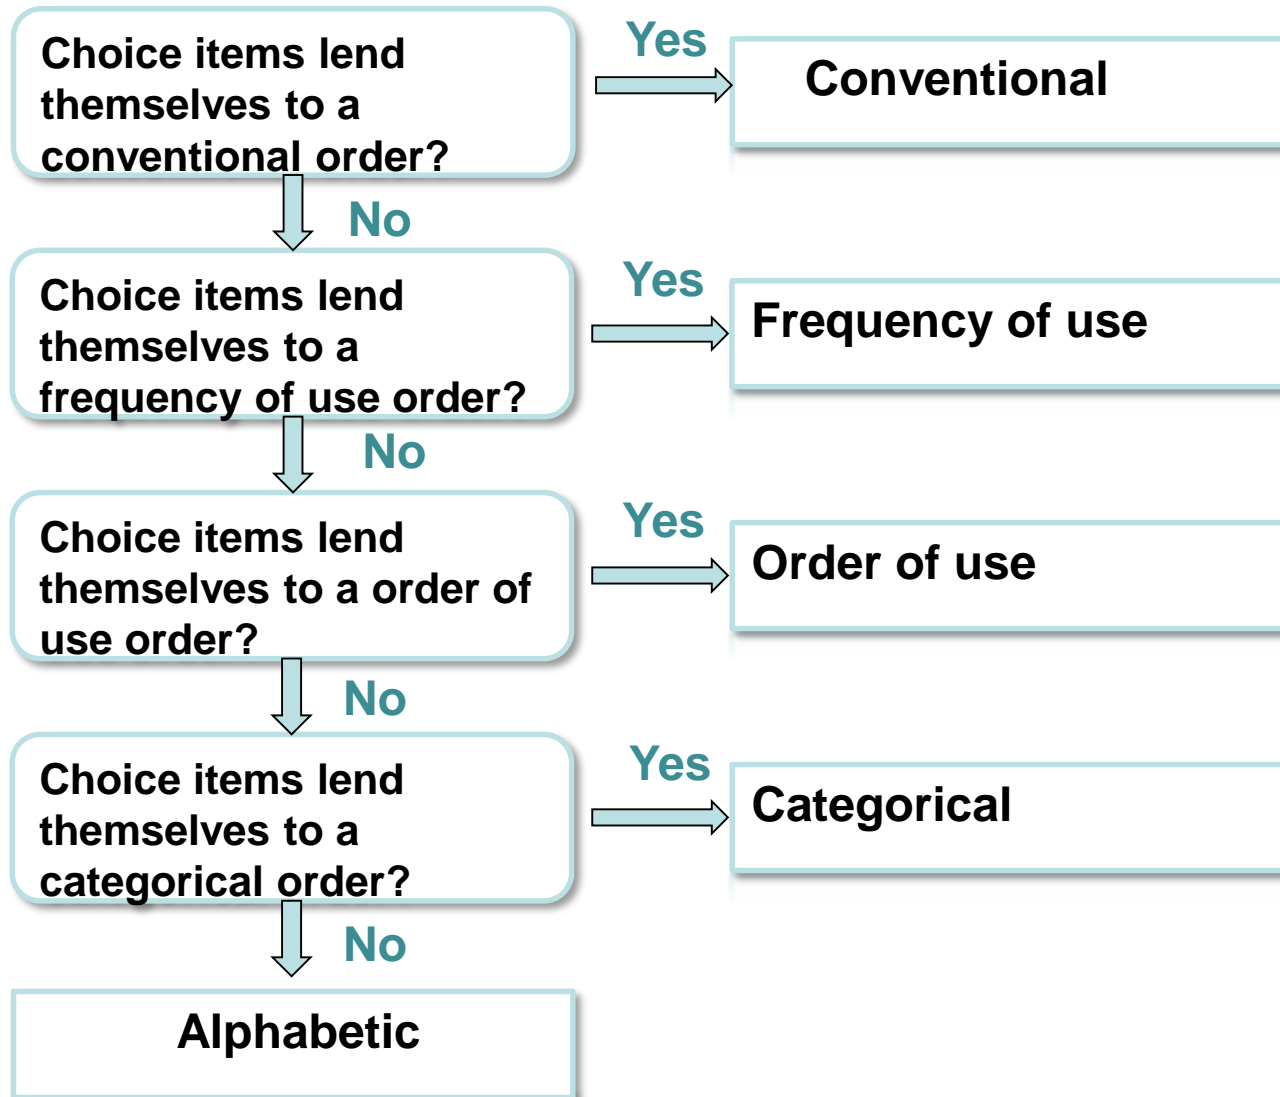

Select adequate option ordering

Which ordering scheme would you select?

Why?

Select adequate option ordering

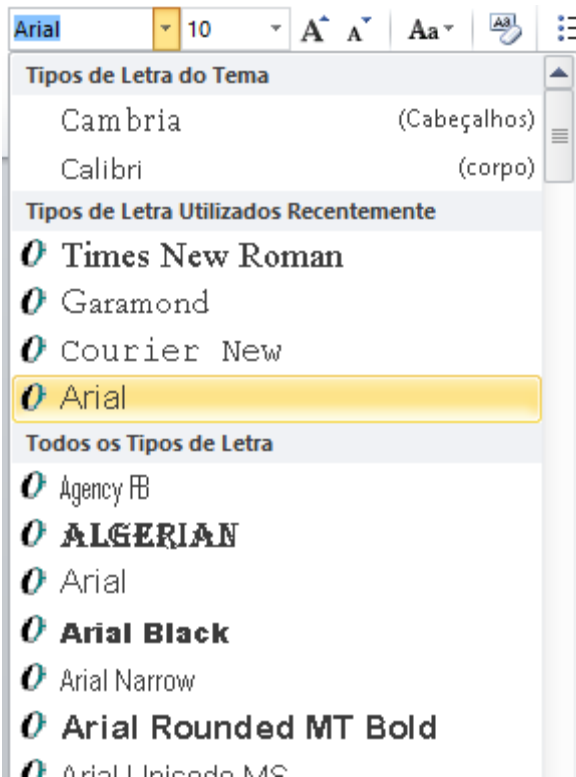

Option ordering

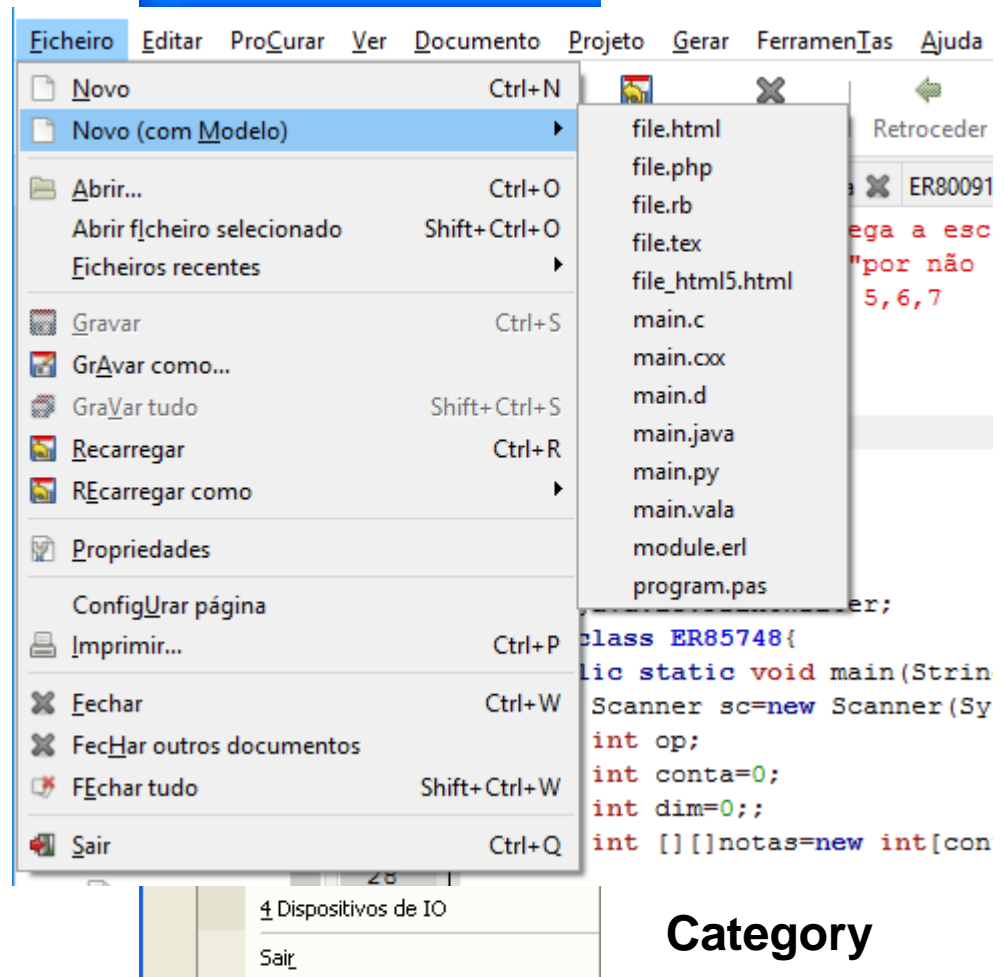

Conventional

Alphabetic + frequency

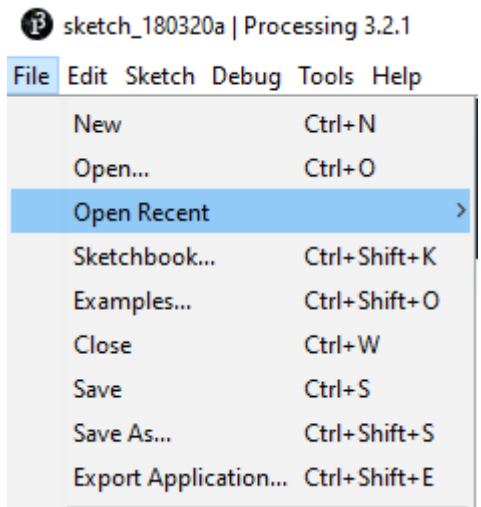

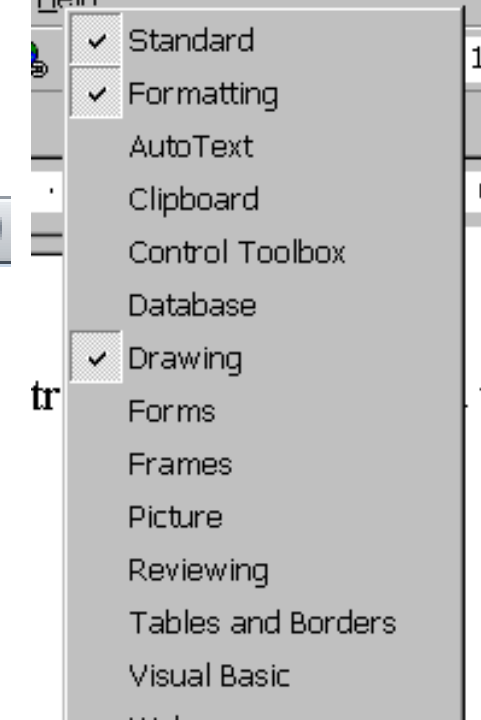

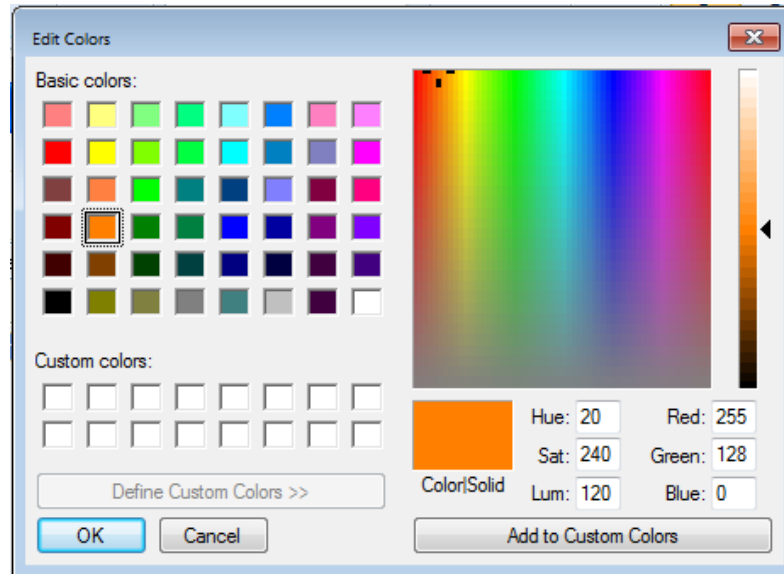

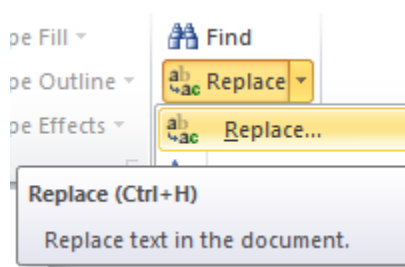

Order of use

Category

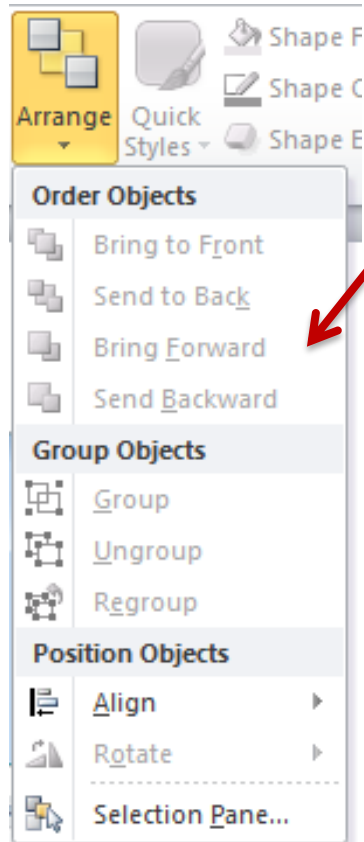

Give selection feedback

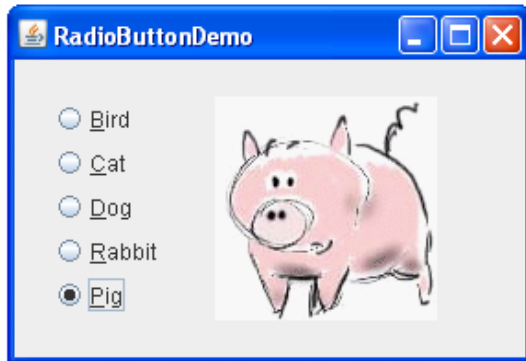

Indicate currently unavailable options

In grey to let users know they exist, but are unavailable

- Preventing errors
- And showing existing options (functionality)

Make clear the difference between choices of only one or several

“Radio button”:
Only a single option can be selected from several mutually exclusive options

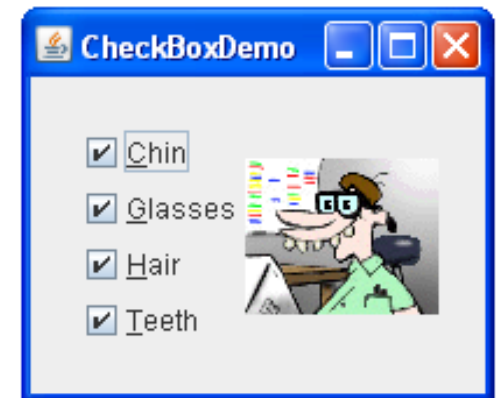

https://en.wikipedia.org/wiki/Radio_button

Effects

- | | |
|--|--|
| <input checked="" type="radio"/> No strikethrough | <input checked="" type="radio"/> No effect |
| <input type="radio"/> Strikethrough | <input type="radio"/> Shadow or outline |
| <input type="radio"/> Double strikethrough | <input type="checkbox"/> Shadow |
| | <input type="checkbox"/> Outline |
| <input checked="" type="radio"/> No super or subscript | <input type="radio"/> Emboss |
| <input type="radio"/> Superscript | <input type="radio"/> Engrave |
| <input type="radio"/> Subscript | |

“Check box”:

Permits to make a binary choice.
A series of checkboxes may be presented
The user may select several of the choices

Select only one alternative:

	Service	From	To
<input type="radio"/>	AP No. 180	06:21	08:22
<input checked="" type="radio"/>	AP No. 130	07:21	09:22
<input type="radio"/>	IC No. 520	07:31	09:52

Possible to select more than one alternative:

Additional seat options

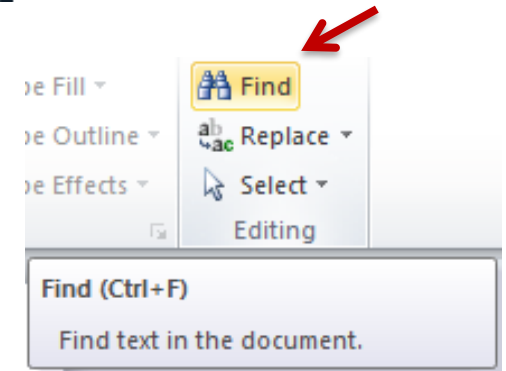

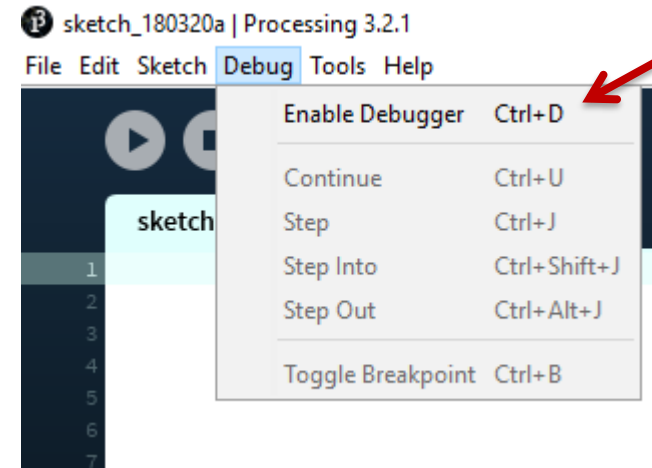

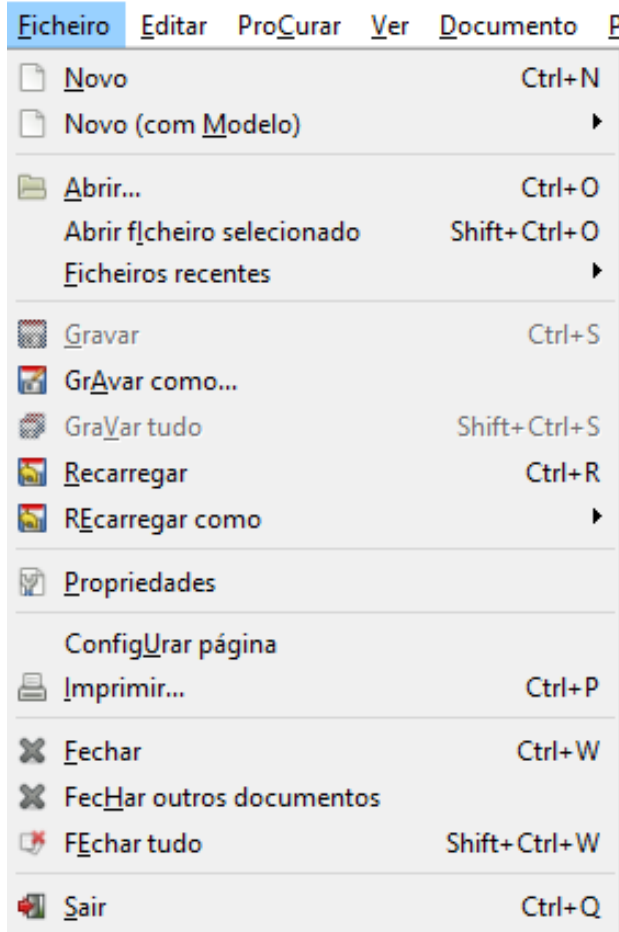

Special needs seat  Bikes 

May we send you updates using e-mail?

Yes, please use e-mail to send me information about other offerings.

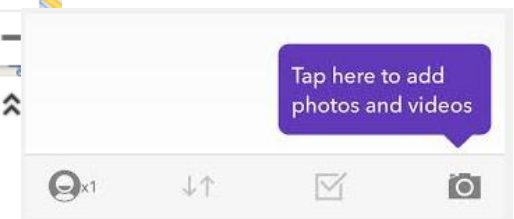

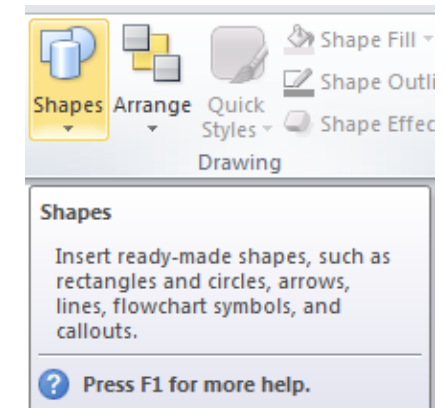

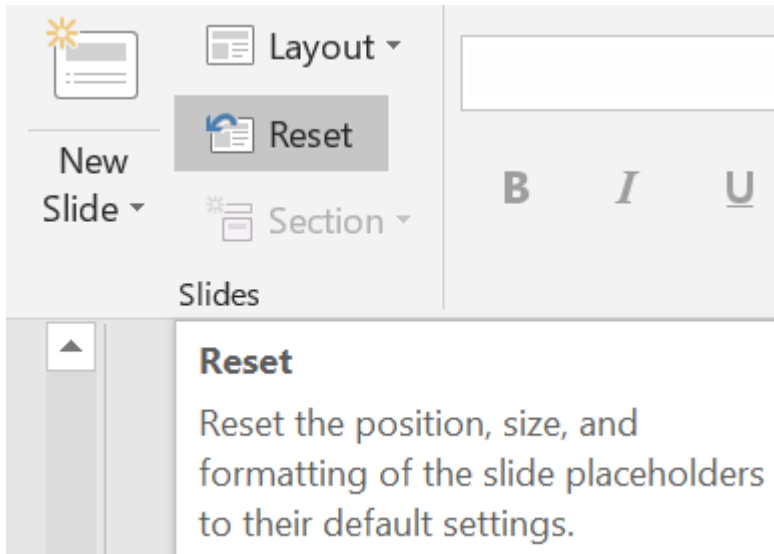

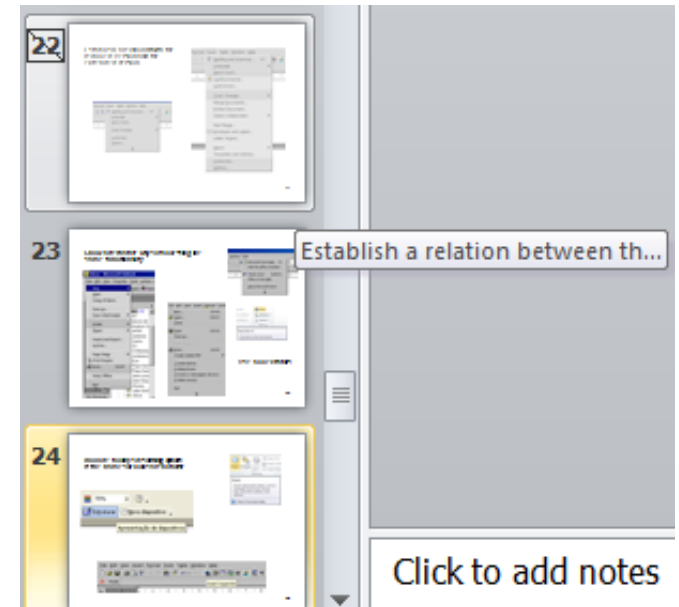

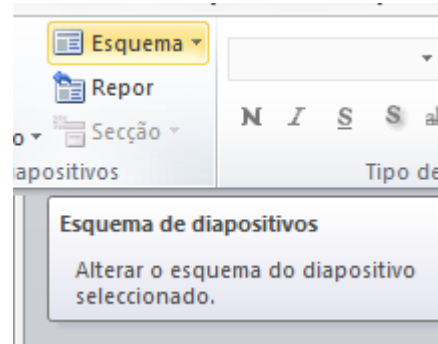

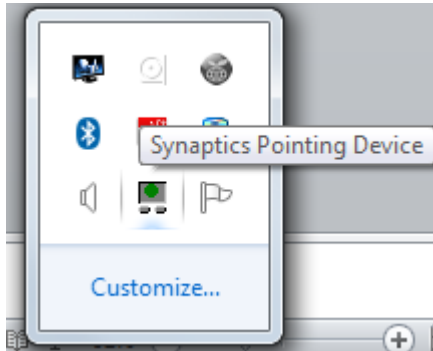

<https://www.nngroup.com/articles/checkboxes-vs-radio-buttons/>

Show alternative ways of accessing the same functionality

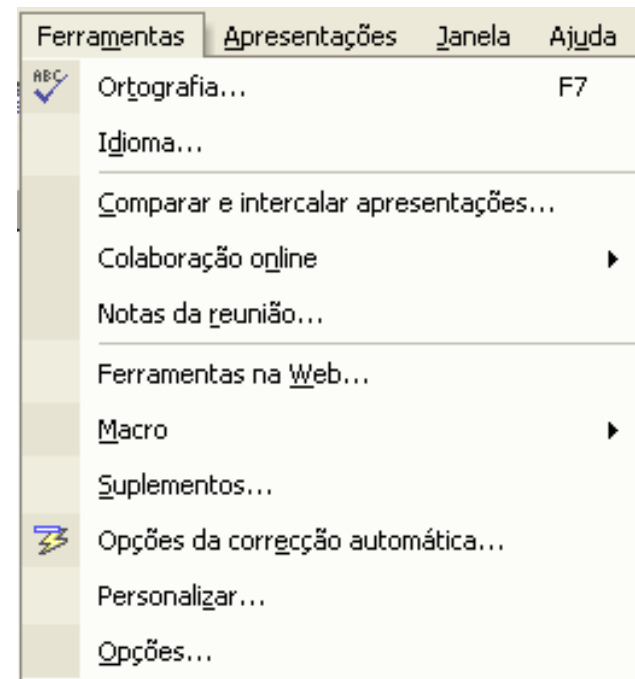

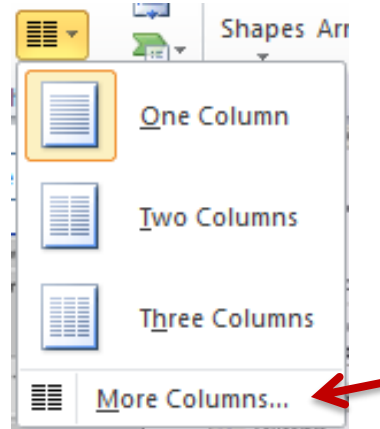

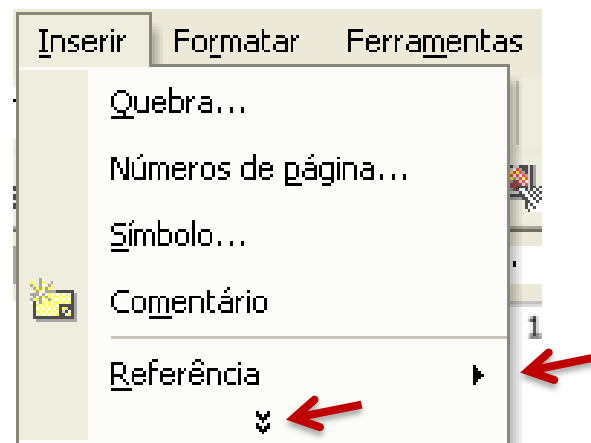

Use accelerators
(Flexibility and efficiency of use)

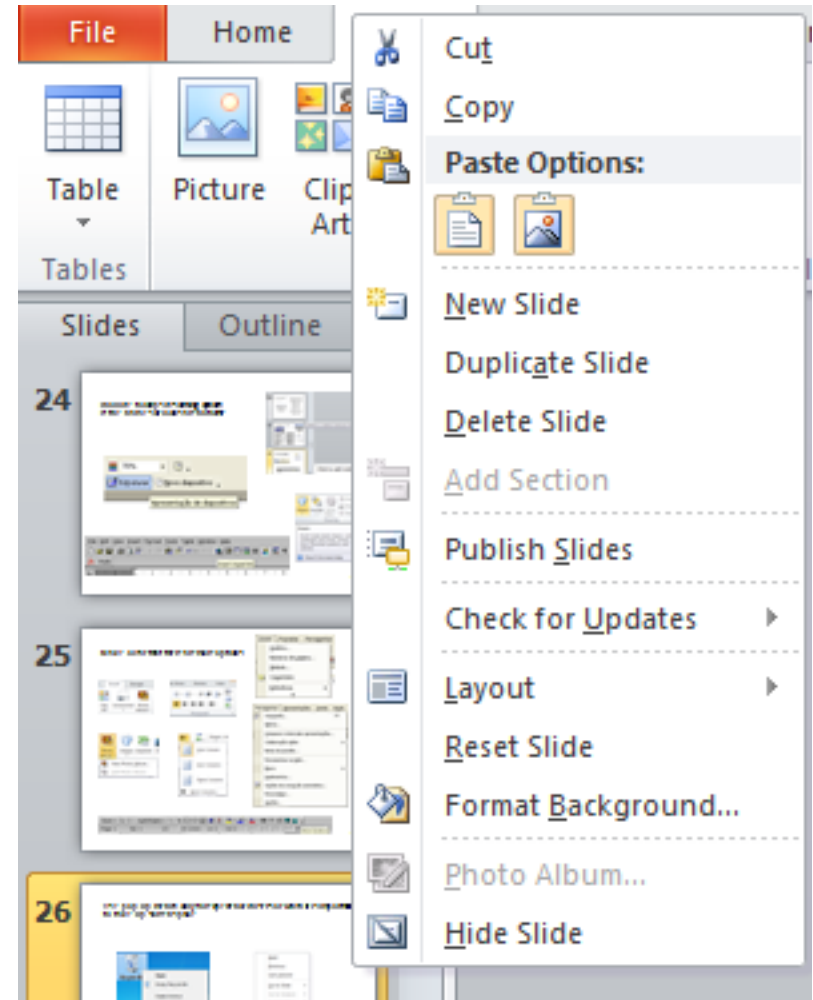

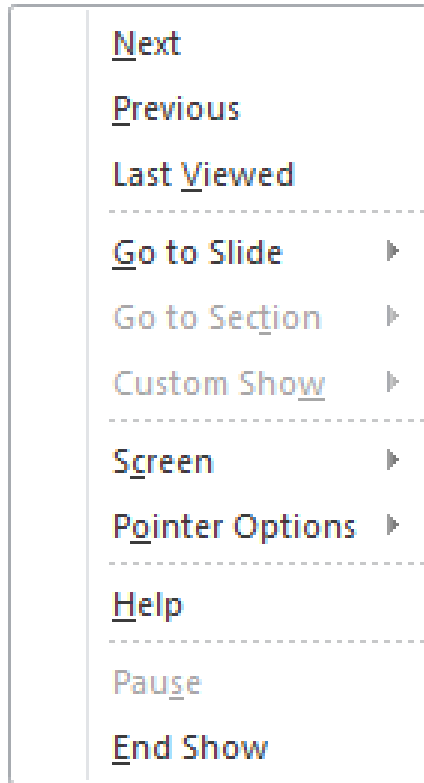

Include tooltips describing options if the names or icons are not clear

Make clear that there are more options

Use pop-up menus (context menus) only for experienced users or when it is very important not to take up screen space

**(e.g.:
during a Power Point presentation)**
