<b>Preface</b>	<b>xi</b>
<b>List of Contributors</b>	<b>xiii</b>
<b>1 Introduction</b>	<b>1</b>
JOHN J. BENEDETTO AND PAULO J. S. G. FERREIRA	
1.1 The Classical Sampling Theorem . . . . .	1
1.2 Non-Uniform Sampling and Frames . . . . .	10
1.3 Outline of the Book . . . . .	21
1.3.1 Sampling, Wavelets, and the Uncertainty Principle . . . . .	22
1.3.2 Sampling Topics from Mathematical Analysis . . . . .	23
1.3.3 Sampling Tools and Applications . . . . .	25
<b>2 On the Transmission Capacity of the “Ether” and Wire in Electrocommunications</b>	<b>29</b>
V. A. KOTEL’NIKOV (TRANSLATED BY V. E. KATSNELSON)	
<b>I Sampling, Wavelets, and the Uncertainty Principle</b>	<b>49</b>
<b>3 Wavelets and Sampling</b>	<b>51</b>
GILBERT G. WALTER	
3.1 Introduction . . . . .	51
3.1.1 Background . . . . .	51
3.1.2 The RKHS Setting . . . . .	52
3.1.3 The Wavelet Setting . . . . .	53
3.2 Sampling in Other Spaces . . . . .	54
3.2.1 Impulse Train Convergence . . . . .	55
3.2.2 RKHS and Sampling . . . . .	59
3.3 Sampling in Wavelet Subspaces . . . . .	61
3.3.1 Elements of Wavelet Theory . . . . .	61
3.3.2 Sampling Functions . . . . .	62
3.3.3 Sampled Values as Coefficients . . . . .	65
3.4 Interpolating Multiwavelets . . . . .	68
3.4.1 Properties of Hermite Sampling Functions . . . . .	70

<b>4</b>	<b>Embeddings and Uncertainty Principles for Generalized Modulation Spaces</b>	<b>75</b>
	J. A. HOGAN AND J. D. LAKEY	
4.1	Introduction . . . . .	75
4.1.1	Weighted Fourier Inequalities Imply Uncertainty Principle Inequalities . . . . .	77
4.1.2	Sharp Constants and Endpoint Estimates . . . . .	78
4.1.3	Embeddings for Modulation Spaces . . . . .	79
4.2	The Short-Time Fourier Transform and Modulation Spaces	79
4.2.1	Weighted Fourier Inequalities Imply Modulation Embeddings . . . . .	82
4.2.2	Representation Theory and the Link with Littlewood–Paley Theory . . . . .	83
4.2.3	More Remarks on the Uncertainty Principle . . . . .	84
4.3	Modulation Embeddings and Uncertainty Principles . . . . .	84
4.3.1	Gröchenig’s Two-Sided Embedding Theorem . . . . .	84
4.3.2	Lieb’s Sharp Single-Sided Embedding Theorem . . . . .	90
4.4	Symmetric Localization . . . . .	91
4.5	Generalized Modulation Spaces . . . . .	95
4.5.1	Generalized Square-Integrability, Frames, and the Metaplectic Group . . . . .	96
4.5.2	The Metaplectic Group . . . . .	97
4.5.3	Generalized Square Integrability . . . . .	98
4.5.4	Connection with Time-Frequency Localization . . . . .	99
4.5.5	Metaplectic Frames . . . . .	99
4.6	Generalized Modulation Spaces and Embedding . . . . .	102
<b>5</b>	<b>Sampling Theory for Certain Hilbert Spaces of Bandlimited Functions</b>	<b>109</b>
	JEAN-PIERRE GABARDO	
5.1	Introduction . . . . .	109
5.2	Notation . . . . .	110
5.3	Positive-Definite Distributions on $(-R, R)$ . . . . .	111
5.4	The Case Where $\mathcal{M}_R(\mu)$ Has Finite Codimension in $L^2_\mu$ . . . . .	118
5.5	The General Case . . . . .	131
5.6	Riesz Bases and Frames . . . . .	136
<b>6</b>	<b>Shannon-Type Wavelets and the Convergence of Their Associated Wavelet Series</b>	<b>139</b>
	AHMED I. ZAYED	
6.1	Introduction . . . . .	139
6.2	Preliminaries . . . . .	140
6.3	Shannon’s Wavelet . . . . .	143
6.4	Generalized Shannon Wavelets . . . . .	144
6.5	Pointwise Convergence of Shannon-type Wavelet Series . . . . .	151

<b>II</b>	<b>Sampling Topics from Mathematical Analysis</b>	<b>157</b>
<b>7</b>	<b>Non-Uniform Sampling in Higher Dimensions: From Trigonometric Polynomials to Bandlimited Functions</b>	<b>159</b>
	KARLHEINZ GRÖCHENIG	
7.1	Introduction . . . . .	159
7.2	Non-Uniform Sampling With Trigonometric Polynomials . . . . .	161
7.3	Toward Bandlimited Functions . . . . .	165
7.4	Proof of Theorem 7.1 . . . . .	171
<b>8</b>	<b>The Analysis of Oscillatory Behavior in Signals Through Their Samples</b>	<b>177</b>
	RODOLFO H. TORRES	
8.1	Introduction and Motivation . . . . .	177
8.2	Besov Spaces of Functions . . . . .	182
8.3	Sampling Theorem for Besov Spaces and Their Discrete Counterpart . . . . .	186
8.4	Other Characterizations of the Discrete Besov Spaces . . . . .	189
8.5	Nonlinear Approximation of Band Limited Signals Using Samples . . . . .	192
8.6	Concluding Remarks . . . . .	196
<b>9</b>	<b>Residue and Sampling Techniques in Deconvolution</b>	<b>197</b>
	STEPHEN CASEY AND DAVID WALNUT	
9.1	Introduction . . . . .	197
9.1.1	Statement of the Problem . . . . .	197
9.1.2	The Coprime Condition and Local Deconvolution . . . . .	198
9.1.3	Other Types of Deconvolvers . . . . .	199
9.1.4	Example: Cubes in $\mathbb{R}^d$ . . . . .	200
9.1.5	Example: Balls in $\mathbb{R}^d$ . . . . .	201
9.1.6	Practical Deconvolution . . . . .	202
9.2	Residue Methods for Deconvolution . . . . .	203
9.3	Sampling Methods for Deconvolution . . . . .	214
9.3.1	Deconvolution and Sets of Uniqueness in $C^{m-2}[-R, R]$ . . . . .	214
9.3.2	Nonperiodic Frames and Bases for $L^2[-R, R]$ . . . . .	219
9.3.3	Deconvolution and the Completeness of $\mathcal{F}$ . . . . .	221
<b>10</b>	<b>Sampling Theorems from the Iteration of Low Order Differential Operators</b>	<b>223</b>
	J. R. HIGGINS	
10.1	Introduction . . . . .	223
10.2	Preliminary Facts and Methods . . . . .	224
10.3	Examples of the Method . . . . .	227
10.4	Remarks and Open Problems . . . . .	231

<b>11 Approximation of Continuous Functions by Rogosinski–Type Sampling Series</b>	<b>233</b>
ANDI KIVINUKK	
11.1 Notation and Introduction to the Sampling Series . . . . .	233
11.2 Rogosinski–Type Sampling Series . . . . .	236
11.3 Applications to Generalized Sampling Series . . . . .	244
11.4 Conclusion . . . . .	248
<b>III Sampling Tools and Applications</b>	<b>249</b>
<b>12 Fast Fourier Transforms for Nonequispaced Data: A Tutorial</b>	<b>251</b>
DANIEL POTTS, GABRIELE STEIDL, AND MANFRED TASCHE	
12.1 Introduction . . . . .	251
12.2 NDFT for Nonequispaced Data Either in Time or Frequency Domain . . . . .	254
12.3 NDFT for Nonequispaced Data in Time and Frequency Domain . . . . .	262
12.4 Roundoff Errors . . . . .	264
12.5 Fast Bessel Transform . . . . .	269
<b>13 Efficient Minimum Rate Sampling of Signals with Frequency Support over Non-Commensurable Sets</b>	<b>275</b>
CORMAC HERLEY AND PING WAH WONG	
13.1 Introduction . . . . .	275
13.2 Periodic Non-Uniform Sampling . . . . .	277
13.3 Reconstruction of a Discrete-Time Signal from $N$ Samples Out of $M$ . . . . .	279
13.4 Filter Design Using POCS . . . . .	287
13.5 Minimum Rate Sampling of Multiband Signals . . . . .	288
13.6 Slicing the Spectrum . . . . .	292
13.6.1 Dividing the Bands into Slices . . . . .	294
13.6.2 Freedom in Pairing . . . . .	294
13.6.3 Pairing the Edges . . . . .	295
<b>14 Finite and Infinite-Dimensional Models for Oversampled Filter Banks</b>	<b>297</b>
THOMAS STROHMER	
14.1 Introduction . . . . .	297
14.1.1 Oversampled Filter Banks and Frames . . . . .	299
14.2 Finite-Dimensional Models for Filter Banks . . . . .	300
14.2.1 The Finite Section Method for Oversampled Filter Banks . . . . .	301

14.2.2	Finite Sections, Laurent Operators, and Polyphase Matrices . . . . .	302
14.2.3	Polyphase Matrices and “Perfect Symbol Calculus” in Finite Dimensions . . . . .	304
14.3	Convergence and Rates of Approximation for Finite Dimensional Approximations . . . . .	305
14.3.1	Rates of Approximation for Oversampled Filter Banks . . . . .	306
14.4	Convergence Using Polyphase Representation . . . . .	309
14.5	Finite-Dimensional Approximation of Paraunitary Filter Banks Via $S^{-\frac{1}{2}}$ . . . . .	313
14.6	Oversampled DFT Filter Banks — Beyond Polyphase Representation . . . . .	315
14.6.1	Matrix Factorization of the Frame Operator . . . . .	316
<b>15</b>	<b>Statistical Aspects of Sampling for Noisy and Grouped Data</b>	<b>321</b>
	M. PAWLAK AND U. STADTMÜLLER	
15.1	Introduction . . . . .	321
15.2	Sampling from Noisy Data and Signal Recovery . . . . .	323
15.3	Signal Recovery from Grouped Data . . . . .	329
15.4	Statistical Accuracy . . . . .	331
15.5	Concluding Remarks . . . . .	338
15.6	Proofs . . . . .	340
<b>16</b>	<b>Reconstruction of MRI Images from Non-Uniform Sampling and Its Application to Intrascan Motion Correction in Functional MRI</b>	<b>349</b>
	MARC BOURGEOIS, FRANK T. A. W. WAJER, DIRK VAN ORMONDT, AND DANIELLE GRAVERON-DEMILLY	
16.1	Introduction . . . . .	349
16.2	MRI Sampling Trajectories . . . . .	350
16.3	Motion Influence and Correction of Intrascan Motion Artifacts . . . . .	352
16.3.1	Physiological and Subject Motions . . . . .	352
16.3.2	Reduction of Motion Artifacts in Images . . . . .	353
16.3.3	Correction of Intrascan Motions in fMRI . . . . .	353
16.4	Image Reconstruction from Non-Uniform Sampling . . . . .	356
16.4.1	Gridding from a Non-Uniform Grid to a Cartesian Grid and Vice Versa . . . . .	356
16.4.2	Density Correction and Voronoi Algorithm . . . . .	357
16.4.3	Limits of Gridding . . . . .	358
16.5	Bayesian Image Estimation . . . . .	359
16.5.1	Preamble . . . . .	359
16.5.2	The Most Probable Image . . . . .	360

16.5.3	The Likelihood . . . . .	361
16.5.4	The Prior . . . . .	361
16.5.5	Calculation of $T_1$ . . . . .	364
16.6	Applications of Intrascan Motion Correction to fMRI . . . . .	364
16.6.1	Shepp-Logan Simulation . . . . .	364
16.6.2	Simulated fMRI Experiment . . . . .	365
16.7	Conclusions . . . . .	368
<b>17</b>	<b>Efficient Sampling of the Rotation Invariant</b>	
	<b>Radon Transform</b>	<b>371</b>
	LAURENT DESBAT AND CATHERINE MENNESSIER	
17.1	Introduction . . . . .	371
17.1.1	Principle . . . . .	371
17.1.2	Inverse Problem Formalism . . . . .	372
17.2	Efficient Sampling in 2D Tomography . . . . .	375
17.2.1	Results in Standard Tomography . . . . .	375
17.2.2	Generalization to the Rotation Invariant Radon Transform . . . . .	377
17.3	Application to Doppler Imaging . . . . .	380
17.3.1	Null Inclination Case: $\alpha = 0$ . . . . .	380
17.3.2	Perpendicular Inclination Case: $\alpha = \pi/2$ . . . . .	380
17.4	Discussion . . . . .	382
